

WA-23 Passive Infrared Lens Array

Uniform Sensitivity PIR Lens Array

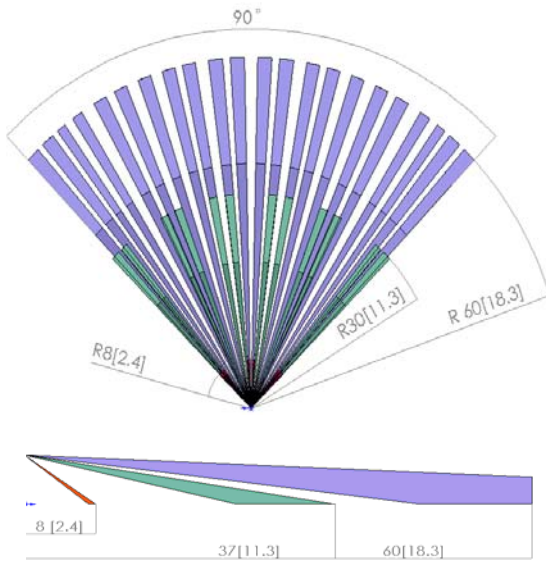

The WA-23 is a short focal length Fresnel lens array that is designed for Passive Infrared (PIR) sensor applications. This lens can be used in applications involving security, lighting controls, and environmental controls. The lens is designed for uniform sensitivity, which means that each zone has approximately the same sensitivity as the others, and the total electronic gain of the sensor can be minimized. It features a 90-degree field of view and an extra short focal length that makes it well suited for compact, low profile sensors.

Recommended Installation

Sample Protection Pattern

Specifications:

- Reflexite Part #IO8908
- Range: 60 ft (18 m).
- Field of View: 90°.
- Installation Height: 7-10 ft. (2.1– 3 m).
- Focal Length: 23 mm
- Material: HDPE.
- Colors: White, Grey, and Natural.
- Optimized for dual element pyroelectric devices.
- Uniform sensitivity for improved sensor efficiency.
- White light immunity to reduce false triggers.
- UV resistant for outdoor applications.
- Dimensions are in inches (mm)
